Landfill Management Solutions

Odor Control

- > Neutralizers for perimeter, drift, and working face
- > H₂S Inhibitors and scavengers for leachate

Dust Control

- > Chemical and equipment

Service, Operation & Maintenance

Leachate Management

- > Scale prevention and cleanup of distribution systems
- > Turn-key application and system management

Wastewater Management

- > Polymers and Bioaugmentation
- > Reverse Osmosis, Ultrafiltration, and Microfiltration membrane systems
- > Filtration

Ongoing Proof of Customer Satisfaction

Odor Control

Privately owned landfill near the Great Lakes was experiencing numerous complaints from its Northeastern neighbors. It switched odor control treatment from a cherry masking agent to ProSweet™ OC2533 vaporless neutralizer and eliminated neighbor complaints.

ProSweet™ OC2533 Odor Neutralization

Leachate Management

The EPA was shutting down a Northeast landfill because its leachate collection system was blocked with scale. Water Technologies performed descaling service with ScaleTrol™ PDC9333 and restored the landfill to normal operation saving the landfill \$2,400 per day.

After

ScaleTrol™ PDC9333

Reverse Osmosis

Two Superfund landfill sites in Colorado and California needed to meet landfill leachate regulations. Water Technologies developed a reverse osmosis spiral wound thin film composite membrane technology to remove heavy metals and organics.

PRO Series Reverse Osmosis Equipment
